

The IMMUNE Building Standard™ is developed in Romania by a team of 20 experts in health, technology, architecture, constructions, engineering, and facility management and was initiated by Liviu Tudor, founder of Genesis Property and president of the European Property Federation.

- H3 Building, a workplace in Bucharest filled with anti-virus innovations could become the new normal in office design, its creators hope.
- Disinfection robots and thermal body cameras: welcome to the anti-Covid office.
- The Swedish telecommunications company Ericsson is the current occupant of H3, a 15,500 sq m space that has been retrofitted over the past year aiming to “gain people’s confidence, to reassure them that we’ve done everything to protect the building’s health so as to protect theirs, and give them as much information as possible,” said a representative of the company.
